Agenda

6:00 PM Networking
6:30 PM Dinner
7:30 PM Presentation

Program Acoustic noise problems become more and more evident as increased numbers of large industrial equipment are in use. Active noise control (ANC) is achieved by introducing a canceling "antinoise" wave through an appropriate array of secondary sources. ANC is an effective way to attenuate noise that is very difficult and expensive to control using passive means. It has application to a wide variety of problems in manufacturing, industrial applications, and consumer products. This talk will briefly introduce the principle of ANC, and focus on many real-world applications to automotive,

appliances, transportation, communications, entertainment, and a new snore control.

Speaker Sen M. Kuo is currently a Professor and Chair at the Department of Electrical Engineering, Northern Illinois University, DeKalb, IL. In 1993, he was with Texas Instruments, Houston, TX. He is the leading author of several books: "Active Noise Control Systems" (Wiley, 1996), "Real-time Digital Signal Processing" (Wiley 2001), "Digital Signal Processors" (Prentice-Hall 2004) and over 150 technical papers. He has been awarded seven US patents. He received the IEEE first-place transactions paper award in 1993, and a faculty-of-year award in 2001. His research focuses on active noise and vibration control, adaptive echo and noise cancellation, digital audio applications, and digital communications.

Meal/Reservations

There will be a chicken and vegetarian selection. Please

reserve your space and/or dinner selection by **calling Ginger at 815-394-5696 or sending an email (ginger.spinasant@hs.utc.com) by Tuesday, Sep 23, at noon.** Please include your name, phone number, email address, IEEE member number and meat or vegetarian selection.
